

Ramps for Interlocking Rubber Mats

These ramps connect with any of our CushionEase interlocking rubber mats. They provide a safe transition to the mat height (3/4"), and are constructed from 100% nitrile, which is extremely resistant to oils, chemicals and wear. The ramps come in several lengths as well as male and female configurations, and are suitable for straight runs, outside corners and inside corners.

For custom on-site installations, ramps may be permanently bonded, or snapped together for later re-configuration. Ramps attach to mats and each other with a solid mechanical semi-permanent connection at all points.

Available in four permanent colors including black, orange, yellow and terra cotta. Lengths available are 2' long male, 3' long male / female, and 5' long male or female. Compatible mats available in several surface finishes and rubber compounds to fit a wide range of needs.

Perfect anywhere you need a safety edge or roll-up ramp and modular interlocking matting system, including manufacturing, assembly lines, machine shops, fabrication and repair shops.

Please call if you have questions or need help designing a mat system for your specific need.

- 2', 3' and 5' long male / female
- Black, Orange, Yellow and Terra Cotta colors available
- 100% Nitrile resists chemicals

Item No: FM.INTLRAMP
